Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to a current to voltage conversion circuit utilizing a photoelectric conversion device, current source current mirror means, an amplifier, read current mirror means, write current mirror means, switching means and a feedback resistor recited in claims 1-14. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: the combination of "the photoelectric conversion device", "the current source current mirror means", "the amplifier", "the read current mirror means", "the write current mirror means", "the switching means" and "the feedback resistor" as recited in claim 1.

The prior art reference submitted by the applicant on IDS form received on 12/4/03 was reviewed and considered. This reference (Ref. No. 11186856) appears to be the best reference with respect to the claimed invention (e.g. current to voltage conversion). However, "the current source current mirror means", "the read current mirror means", "the write current mirror means", "the switching means" and "the feedback resistor" are not disclosed. Therefore, the claims are patentably distinct over this prior art reference of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
